BINANCE PAY

Validate Payer for Binance Pay Deposit

Ask AI

POST

<https://api.getorbital.io/crypto/deposit/invoice/binance/payer/validate> ...

Verify a payer's KYC information with Binance before initiating a Binance Pay deposit invoice.

Validation of Binance Pay payer details is always available, regardless of whether the feature flag is enabled or disabled during invoice creation.

If the payer's **first name** and **last name** do not exactly match their Binance account registration details, the validation will fail. The names must be entered exactly as they appear

in the payer’s Binance profile

Body Params
